## Electronic Training / Personnel Jackets

Today, supervisors at all levels in different industries have to spend much of their valuable time working with cumbersome personnel records and performing administrative duties that keep them from their primary roles. Paper records are also easily removed, compromised or lost, creating even more headaches. eJacket—from ARINC—offers the ideal solution to reduce administrative time, improve standardization, information accuracy and security, and reduce administrative costs.

Originally developed for Navy Air Traffic Control training documentation, eJacket software is designed to streamline data processing, process calculations, produce alerts and maintain historical data for any operation. Local supervisors will be able to enter and update information more efficiently, while managers, inspection teams and regional personnel will have access to view records. The software provides a common platform from which to operate and implement any necessary site-specific modifications.

With budget restraints more important today than ever, eJacket is also considerably more cost-effective than hard copy personnel jackets. By reducing paper and ink use, as well as the process of mailing records, operating costs can be significantly reduced.

ARINC Incorporated, a portfolio of the Carlyle Group, provides communications, engineering and integration solutions for commercial, defense and government customers worldwide. Headquartered in Annapolis, Maryland with regional offices in London and Singapore, ARINC is ISO 9001:2008 and AS9100 certified.

## DEDICATION BEYOND EXPECTATION

### Quick Facts

- ▶ eJacket reduces administrative paperwork, cuts costs and increases management accessibility
- ▶ Provides supervisory personnel with more time to accomplish other tasks, therefore increasing overall operational efficiency
- ▶ Off-site server hosting
- ▶ World-wide accessibility
- ▶ Increases information security and eliminates the need to mail records
- ▶ Adaptable to any community and seamlessly integrates with other training/tracking data bases
